SOURCE

Between 1950 and February 1952, only little air activity was observed over the northern section of Siedlce (R 53/L 83). No jet planes or four-engine aircraft were identified. Twin-engine transport planes with a silver sheen were observed flying at regular intervals. In addition, there was intensive flying with biplanes. Occasionally, single-engine aircraft with piston engines flew at daytime and in good weather. No firing exercises, acrobatics, formation flying or parachuting was observed.
